

DERMAL FILLERS DUBAI

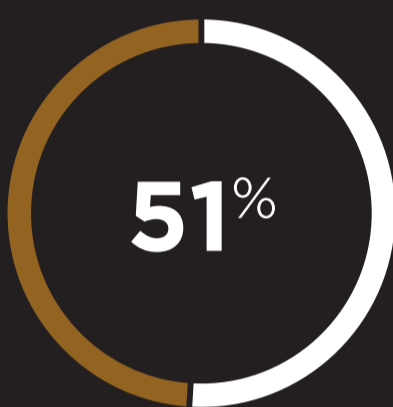

Dermal fillers, face fillers, and soft tissue fillers are non-invasive ways to sculpt the facial features with immediate and long lasting results. The dermal facial filler industry is projected to grow substantially due to the increasing satisfaction of clients all over the world.

The procedure involves injecting the face in various areas to place a gel type product in deep or superficial planes to build up volume and correct facial wrinkles. This effect simulates the natural volume from youthful fat under the skin that we naturally lose as we age.

WHEN IT COMES TO **DERMAL FILLERS**...

SAY **SAFETY** IS IMPORTANT

SAY A **NATURAL LOOK** IS IMPORTANT

SAY A **LONG LASTING RESULT** IS IMPORTANT

It is very important to understand the temporary nature of your treatment plan and to prepare for proper maintenance. Filler treatments are temporary. They typically last 12-24 months depending upon the type and indication by the manufacturer. In some cases, depending on personal metabolism, fillers may only last 6-8 months.
