1 hour

POST OP CONSULTATIONS

2 days, 1 week, 1 month, 2 months

CLINIC

Healthbay Clinic

JOURNEY

The patient has noticed some fat in the buccal area and she was looking to remove it.

TREATMENT

The patient underwent Buccal Fat Pad Removal under Local Anaesthesia.

A buccal fat removal removes the buccal fat pad, a naturally-occurring pad of fat in the cheek hollow area. The size of the buccal fat pad varies with each individual patient, and the buccal fat pad in each cheek may be different sizes.

RECOVERY & FOLLOW UPS

The patient was swollen and had some bruises for a few days but with the updated instructions each follow up she was able to heal faster.

RESULTS

The before and after pictures show the difference after few weeks of the surgery.

"I can't thank you enough for the excellent job you did. By your skill and talent you have given me something I never dreamed I could have - a positive self image!"
