

PATIENT JOURNEY

OTOPLASTY (COSMETIC EAR SURGERY)

GENDER

Female

AGE

12 years old

PROCEDURE

Otoplasty (Cosmetic Ear Surgery)

OPERATION DURATION

2 hours in operating theater.

CLINIC

Amwaj Polyclinic

JOURNEY

Many people who dislike the shape or size of their ears develop habits to mask the problem often being unaware of the quick, safe and effective solutions provided by surgery. This nice girl was brought to me by her mother as she started to be bullied at school for her prominent ears. Furthermore she was playing volleyball and she

had to pull your hair up into a ponytail everytime resulting in shyness and anxiety for her.

TREATMENT

The otoplasty procedure involved making incisions hidden behind the ears, where the ear meets the head in its natural fold, therefore exposing the cartilage. Here I score and stitch the cartilage to form the desired shape. The completed result is less prominent ears.

RECOVERY & FOLLOW-UP

The patient wore bandage post-op for 10 days, day and night, and then only night time for 1 month. There are very few side effects involved with ear reshaping surgery, and it's very common to have a small scar behind the ear, or slight bruising and tenderness that will fade in time.

RESULTS

The ear reshaping surgery has provided an effective solution, offering both physical benefits and psychological benefits and improving her confidence levels.

“Now that I am healed, there is not a day that I don't feel a great sense of relief thanks to your work. I love my ears now, which is something I never thought I would be able to say”
