**PRP FOR HAIR LOSS:
DOES IT WORK & IS
IT SAFE?**

Platelet-rich plasma (PRP) is a treatment that is used to accelerate healing in various areas of the body. It may help restore hair growth.

Although PRP is a relatively new approach, there is some scientific evidence to suggest that it can promote hair growth. Cosmetic PRP Therapy Treatment harnesses the healing ability of your blood to regenerate healthy new tissue in the treatment area for natural improvement of thinning hair.

WHY CHOOSE PRP?

Hair loss is generally caused by a lack of cell renewal in the scalp - which makes PRP the perfect treatment as it stimulates the production of new healthy cells. It is a simple and totally natural. PRP provides safe and reliable results and has a very quick recovery period. Only a small amount of blood is taken as though you are having your routine blood testing and local anesthesia is used, so you experience very minimal discomfort. PRP Hair treatments provides effective results with high success rate.

WHAT CAN PRP ACHIEVE?

- Fuller and healthier natural-looking hair
- Significantly increase of hair regrowth
- Production of new healthy cells
- Decreased hair dystrophy and burning or itching sensation
- Can serve as a safe and effective treatment option in Alopecia Areata

PRP HAIR LOSS THERAPY

PRP hair loss therapy is an effective treatment option for increasing hair density in individuals with certain types of hair loss disorders*

PRP hair loss therapy alone is effective in improving hair density and quality when injected into the scalp of men and women with early and mild androgenic alopecia and with telogen effluvium (after correcting the triggers of telogen effluvium). PRP hair loss therapy is effective in increasing hair density and hair quality in individuals with more advanced androgenic alopecia and androgenic alopecia lasting longer than 5 years. PRP hair loss therapy alone does not lead to hair regeneration in individuals with advanced hair loss with scarring and those with complete loss of hair follicles.

*Individual results vary with genetic, hormonal, environmental and other influences

WHAT IS THE PRP PROCEDURE?

The following steps are an example of a common approach to PRP injections for hair loss:

- A medical professional draws blood from a vein in the arm.
- They place the blood sample in a centrifuge.
- The centrifuge spins the blood, separating its components.
- A medical professional extracts the platelets using a syringe.
- A doctor injects the platelets into targeted areas of the scalp.

The entire process may take about 1 hour, and several sessions may be necessary. After receiving PRP treatment, a person can usually return to their regular activities without any limitations.

HOW MANY PRP TREATMENTS WILL I NEED?

For the best result, Dr. Vigo recommends up to three treatments, 4-6 weeks apart, with top-ups at 6-24 months.

AFTER YOUR PRP PROCEDURE

There is no downtime for PRP so you can immediately return to your normal daily routine. It is recommended that strenuous activity and alcohol consumption is be avoided for 24 hours post procedure. The results of PRP can usually be seen between two to three months post treatment.

CLINICAL RESEARCH ON PRP TREATMENT EFFICACY FOR THINNING HAIR

Platelet Rich Plasma is obtained by processing your blood in a centrifuge to get a concentrated mixture of your platelets. Platelets are small cells in your blood that are responsible for your body's healing response to injury. Upon any injury, your platelets release a minimum of eight growth factors which initiate a cascade of events leading to regeneration of healthy tissue to repair the injured area. High-quality PRP leads to the appropriate growth factor release which results in healthy tissue regeneration for thicker hair when injected in these sites.

A BRIEF NOTE FROM
DR MATTEO VIGO

I decided to become a doctor at early age but I was not aware of the world of Plastic Surgery. Once I have discovered it I fell in love with the whole concept behind and how this field of Medicine can be helpful for many people.

I passionately believe that, in order to improve the physical aspect of a patient, the plastic surgeon needs to combine the principles of art and science, adopting a global approach to understanding the individual desires.

Plastic Surgery is a truly fascinating, dynamic, constantly evolving field of medicine and I believe that the role of a Cosmetic Surgeon is unique and highly privileged.

My main goal is to understand the needs of a patient and try to transform their desires into reality. The role of a plastic surgeon is not only merely surgical but also supportive in the decision process of the best treatment to help patients finding themselves and their wellbeing.

All these steps are taken into consideration once a person walks in my office and the service I am offering them is always at the top.

I am combining experience, quality and professionalism to evaluate each single case and offer the best solution for my patients.

“Because you deserve the best” is my motto and I want always to put the patient at the centre of what I am doing.

You have to feel pampered, understood, listened, loved once in my office and the feedback of this feelings from my patient is my best satisfaction.
